The Plutonium Utilization Plan

February 18, 2022
The Federation of Electric Power Companies of Japan

The 9 major utilities (excluding the Okinawa Electric Power), the Japan Atomic Power Company, and Electric Power Development Co., Ltd. (J-Power) have updated the Plutonium Utilization Plan based on the Rokkasho Reprocessing Plant and MOX Fuel Fabrication Plant operation plan and changes in the business environment in the past year.

This new plan describes the amount of plutonium projected to be used by each operator in the three years from FY2022 to FY2024, and the outlook for the use of plutonium in after FY2025.

The utilities have newly agreed to cooperate in promoting the use of plutonium and reducing the amount of plutonium stored. Specifically, with the understanding that each operator will use up their own plutonium in their own pluthermal reactors, operators are planning to cooperate and exchange the plutonium they have each stored in the UK and in France in order to turn the plutonium into MOX fuel in the operating MOX fuel fabrication plant in France. The MOX fuel will then be used in pluthermal reactors in Japan. Operators will continue to cooperate and advance this initiative to further promote the use of plutonium while also explaining to local communities to gain their understanding.

In resource-poor Japan, establishing a nuclear fuel cycle domestically is a critical part of securing a stable supply of energy in the long-term. The importance of pluthermal power generation remains unchanged even as circumstances surrounding nuclear power generation continue to change after the accident at TEPCO’s Fukushima Daiichi Nuclear Power Station.

The 11 power companies have indicated their intent to quickly introduce pluthermal power generation in as many plants as possible and to have at least 12 reactors running on pluthermal energy by FY2030.

Under the Japanese government’s policy of not possessing plutonium without a specific purpose, we will do our utmost to promote pluthermal program to steadily use up all
plutonium including that which is stored abroad and plutonium collected by the Rokkasho Reprocessing Plant.
### Plutonium Utilization Plan

This plan will become more detailed as plants restart and the pluthermal program progress, and as the MOX Fuel Fabrication Plant starts its operation. The amounts to be used from FY2022 to FY2024 are based on the operation plans of each operator (as of January 2022). Operators’ operation plans for FY2025 and onwards have yet to be determined but preliminary projections as of now for amounts to be used at the time are given below to provide plutonium use projections for after the Rokkasho Reprocessing Plant starts operation.

- Estimated amount of annual usage *5
- Amount of spent fuel currently stored (ton U) (As of the end of FY2020)

February 18, 2022
The Federation of Electric Power Companies of Japan
Estimated amount of annual usage is the annualized amount of plutonium contained in MOX fuel that will be loaded onto plants specified in the pluthermal plans formulated by each utility.

Utilities are planning to hand off some of the plutonium collected in France to Electric Power Development Company. (A total of approx. 1.3 tons of fissile plutonium, of which approx. 0.1 tons will come from Tohoku EPCO, approx. 0.7 tons from TEPCO HD, approx. 0.1 tons from Chubu EPCO, approx. 0.1 tons from Hokuriku EPCO, approx. 0.2 tons from the Chugoku EPCO, approx. 0.0 tons from Shikoku EPCO, approx. 0.1 tons from Kyushu EPCO, will be handed over.)

Total amount of plutonium (Put). (The total may not match the sum of the amount stored by each utility as figures were rounded off at the second decimal place.)

Location according to the existing plan. This may change following future study.

Use of domestic MOX fuel are projected to start in FY2026 or later.

Because there is currently no operation plan at Shimane Nuclear Power Station Unit2, there is no set date on when MOX fuel will be introduced. We will start to use MOX fuel with the consent of those in the siting region after restart. (Approx. 0.3 ton Put)

Amount of plutonium projected to be collected as indicated in the "Rokkasho Reprocessing Plant and MOX Fuel Fabrication Plant Operation Plan" (JNFL, February 10, 2022).

Utilities are planning to use up the plutonium stored overseas, cooperating among utilities, on the basic assumption that each utility will use up the plutonium that they have, in their plutonium-thermal reactor.

Will be gradually raising the annual usage amount starting in FY2027 so that by FY2030, approx. 6.6 tons Put to be collected when reprocessing 800 ton U can be used.

Projections for the amounts of plutonium to be used from FY2025 and onwards (total of all operators)
• FY2025: 1.0 ton Put
• FY2026: 2.1 ton Put
• FY2027～2030: ~ approx. 6.6 ton Put/year

*1 Total amount of plutonium (Put). (The total may not match the sum of the amount stored by each utility as figures were rounded off at the second decimal place.)
*2 Location according to the existing plan. This may change following future study.
*3 Use of domestic MOX fuel are projected to start in FY2026 or later.
*4 When MOX fuel can be used
   -: When MOX fuel cannot be used
*5 "Estimated amount of annual usage" is the annualized amount of plutonium contained in MOX fuel that will be loaded onto plants specified in the pluthermal plans formulated by each utility.
*6 Utilities are planning to hand off some of the plutonium collected in France to Electric Power Development Company. (A total of approx. 1.3 tons of fissile plutonium, of which approx. 0.1 tons will come from Tohoku EPCO, approx. 0.7 tons from TEPCO HD, approx. 0.1 tons from Chubu EPCO, approx. 0.1 tons from Hokuriku EPCO, approx. 0.2 tons from the Chugoku EPCO, approx. 0.0 tons from Shikoku EPCO, approx. 0.1 tons from Kyushu EPCO, will be handed over.)
*7 Because there is currently no operation plan at Shimane Nuclear Power Station Unit2, there is no set date on when MOX fuel will be introduced. We will start to use MOX fuel with the consent of those in the siting region after restart. (Approx. 0.3 ton Put)
*8 Amount of plutonium projected to be collected as indicated in the "Rokkasho Reprocessing Plant and MOX Fuel Fabrication Plant Operation Plan" (JNFL, February 10, 2022).
*9 Utilities are planning to use up the plutonium stored overseas, cooperating among utilities, on the basic assumption that each utility will use up the plutonium that they have, in their plutonium-thermal reactor.
*10 Will be gradually raising the annual usage amount starting in FY2027 so that by FY2030, approx. 6.6 tons Put to be collected when reprocessing 800 ton U can be used.
